An approx. 200 kDa outer membrane protein (AAW04505) can be isolated from Moraxella catarrhalis otitis media strain 4223 by electroclution, or expressed from a gene (see also AAT38740) obtd. Irom a strain 4223 genomic library. Natural or recombinant outer membrane protein is useful as an immunogen to protect against infection by Moraxella, esp. M. catarrhalis. It can also be used to detect antibodies, esp. for differential diagnosis between bacteria that cause similar symptoms, and also useful as a carrier for other antigens and used to raise antitumour antibodies for conjugation to therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                 YSLAVGLAATAEGQSTIAIGSDATSSSLGAIALGAGTRAQLQGSIALGQGSVVTQSDNNS

protein,

membrane

outer

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. The can be used in vaccines. [II], and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly offitis media in humans. [II] is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/Clouning 200 kba protein genes from other strains, and for idagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents the M. catarrhalis MSG 200kba protein in pKS348, which is given in the exemplification of the present invention. Heic acid encoding Moraxella catarrhalis in protective vaccines and for diagnosis Claim 1; Fig 8A-V; 247pp; English. nucleic useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              that encodes a 200 kbs outer membrane protein of Moraxella catarrhalis.

The 200 kbs outer membrane protein of Moraxella catarrhalis.

The 200 kbs outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as infugen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis.

(I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the m. catarrhalis strain Q8 200kba protein, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                present invention describes an isolated and purified nucleic acid (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid encoding Moraxella catarrhalis outer membrane protein, useful in protective vaccines and for diagnosis
                                                                                                                                                    Moraxella catarrhalis strain Q8; major outer membrane protein;
200kDa outer membrane protein; antibacterial; immunogenic; infection;

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis.

The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humanas (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/Coloning 200 kDa protein generate Ab. (I) are used for recombinant production of (II) and its genes from other strains, and for idenostic detection of M. catarrhalis.

(I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents the M. catarrhalis less 200 kDa protein, which is given in the exemplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -NGSSLDKIGTDATGQESIAIGGDVKASGDASIAIGSDDLHLLDQHGNPKHPKGTLINDL 179

Its amino acid sequence was deduced from a genomic DNA clone (AAT41476) derived from Haemophilus influenzae type b strain C65. Itage quantities of recombinant HA2 can be produced in transformed prokaryotic or eukaryotic host cells, for use in vaccines against H. influenzae infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant Haemophilus adhesion proteins HAl and HA2 - for use in vaccines against H. influenzae infection.

The present sequence represents a Haemophilus influenzae adhesin

(Hia) protein from the type c Haemophilus influenzae strain API.

Hia genes and proteins have antiinflammatory, auditory and antibacterial

cutivities, and can be used in the production of a vaccine. An

immunogenic composition comprising an Hia gene, a polypeptide encoded

by an Hia gene, or a recombinant Hia polypeptide is useful for inducing

protection against disease caused by Haemophilus strains in a

susceptible host, preferably a human. An Hia protein is useful as an

antigen, in immunogenic preparations including vaccines, as a carrier

for other immunogenic preparations including vaccines, as a carrier

for other immunogenic acused by the infection of Haemophilus

influenzae such as meningitis, epiglottitis, septicaemia and otitis

media. Recombinant production of Hia favours high recovery of the

protein compared to the low recovery of native protein from Haemophilus

influenzae species. A truncated protein has a significantly higher

amount of recovery than a full-length protein. The present sequence represents a Haemophilus influenzae adhesin (Hia) protein from the non-typeable Haemophilus influenzae (NTHi) strain 29. Hia genes and proteins have antinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by misa gene, or a recombinant Hia polypeptide is useful as an susceptible host, preferably a human. An Hia protein is useful as an unique, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. Hia is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis medium compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DANAITVG------QKNAN-----NQVNTLTLKGENGLNI-KTDKNGTVTFGI 1010

The present sequence represents a Haemophilus influenzae adhesin (Hia) protein from the non-typeable Haemophilus influenzae (NTH1) strain K22. His genes and proteins have antlinflammatory, auditory and antibacterial activities, and proteins have antlinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for or other immunogens, and in the generation of dispnostic reagents. His is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of His favours high recovery of the cortein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein negation is a significantly higher amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  55;

The present sequence represents a Haemophilus influenzae adhesin (Hia) protein from the non-typeable Haemophilus influenzae (NTHi) strain M407. Hia genes and proteins have antlinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other immunogenic preparations including vaccines, as a carrier for other immunogenic preparations including vaccines, as a carrier for useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis medium Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein. for 979 KNANNQVNTLTLKGENGLNIKTDKNGTVTFGINTTSGLKAGKSTLNDGGLSIKNPTGSEQ 1038 1039 IQVGADGVKFAKVNNNGVVGAGIDGTTRITRDEIGFTGT-NGSLDKSKPHLSKDGINAGG 1097 1158 VSNPYSSYDTSKTSD---VITFAGENGITTKVNKGVVRVGIDQTKGLTTPKLTVGNN--- 1211 Novel nucleic acid encoding Hemophilus influenzae adhesin protein, f use as antigens and vaccines and for treating Hemophilus influenzae epiglottitis; septicaemia; otitis media; 1098 KKITNIQSGEIAQNSHDAVTGGKIYDLKTELENKISSTAKTAQNSLHEFSVADEQGNNFT v-----tsksengkhtvtftlekdlnvk------natvsdklslgangnk ----NGKGIVIDSQNGQN---TITGLSNTLANVTNDKGSVRTTEQGNIIKDEDKTRA 194 vditsdtnglkfakpstnggngnvhlngiastltdtit--gttksatng--vdvqnhnra 28 krasatvatavi----atilsttvgatttggttstnglkaygst-------Indels 386; Length 1004; Ouery Match 9.4%; Score 970; DB 21; I Best Local Similarity 28.1%; Pred. The present sequence represents a Haemophilus influenzae adhesin (Hia)

protein from the non-typeable Haemophilus influenzae (NTH1) strain 33.

Hia genes and proteins have antiinflammatory, auditory and antibacterial

activities, and can be used in the production of a vaccine. An

activities, and can be used in the production of a vaccine. An

muniogenic composition comprising an Hia gene, a polypeptide encoded

yan Hia gene, or a recombinant Hia polypeptide is useful for inducing

protection against disease caused by Hemophilus strains in a

protection against disease caused by Hemophilus strains in a

protection against disease caused by themophilus strains in a

susceptible host, preferably a human. An Hia protein is useful as an

antigen, in immunogenic preparations including vaccines, as a carrier

for other immunogenic acused by the infection of Haemophilus

is useful for treating diseases caused by the infection of Haemophilus

influenzae such as meningitis, epiglottitis, septicaemia and otitis

media. Recombinant production of Hia favours high recovery of the

protein compared to the low recovery of native protein from Haemophilus

influenzae species. A truncated protein has a significantly higher

amount of recovery than a full-length protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents an antigenic protein derived from Haemophilus paragallinarum strain A-221. The antigenic protein stimulates the production of HI antibodies in fowl. The protein and DNA coding for it can be used in the preparation of vaccines for the prevention of chicken infectious coryza (CIC). The protein and its antibodies can be used in the diagnosis and treatment of CIC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antigenic polypeptide from Haemophilus paragallinarum induces HI antibody production - and is useful for diagnosis of and preparation of vaccines for chicken infectious coryza
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MAVAEYAKSHSTGGGSCATGQVGSVCTLSFARIAALAVLVIGATLSGSAYAQKKDTKHIA 76

The antigenic protein stimulates the production of HI antibodies in fowl. The protein and DNA coding for it can be used in the preparation of vaccines for the prevention of chicken infectious coryza (CIC). The protein and its antibodies can be used in the diagnosis and treatment of CIC.

The present sequence represents a Haemophilus influenzae adhesin (Hia)

protein from the non-typeable Haemophilus influenzae (NTH1) strain K9.

His agenes and proteins have antiinflammatory, auditory and antibacterial

crivities, and can be used in the production of a vaccine. An

cutivities, and can be used in the production of a vaccine. An

immunogenic composition comprising an His gene, a polypeptide encoded

by an His gene, or a recombinant His polypeptide is useful for inducing

protection against disease caused by Haemophilus strains in a

susceptible host, preferably a human. An His protein is useful as an

antigen, in immunogenic preparations including vaccines, as a carrier

for other immunogenic acused by the infection of Haemophilus

influenzae such as meningitis, epiglottitis, septicaemia and otitis

media. Recombinant production of His favours high recovery of the

protein compared to the low recovery of native protein from Haemophilus

influenzae species. A truncated protein has a significantly higher

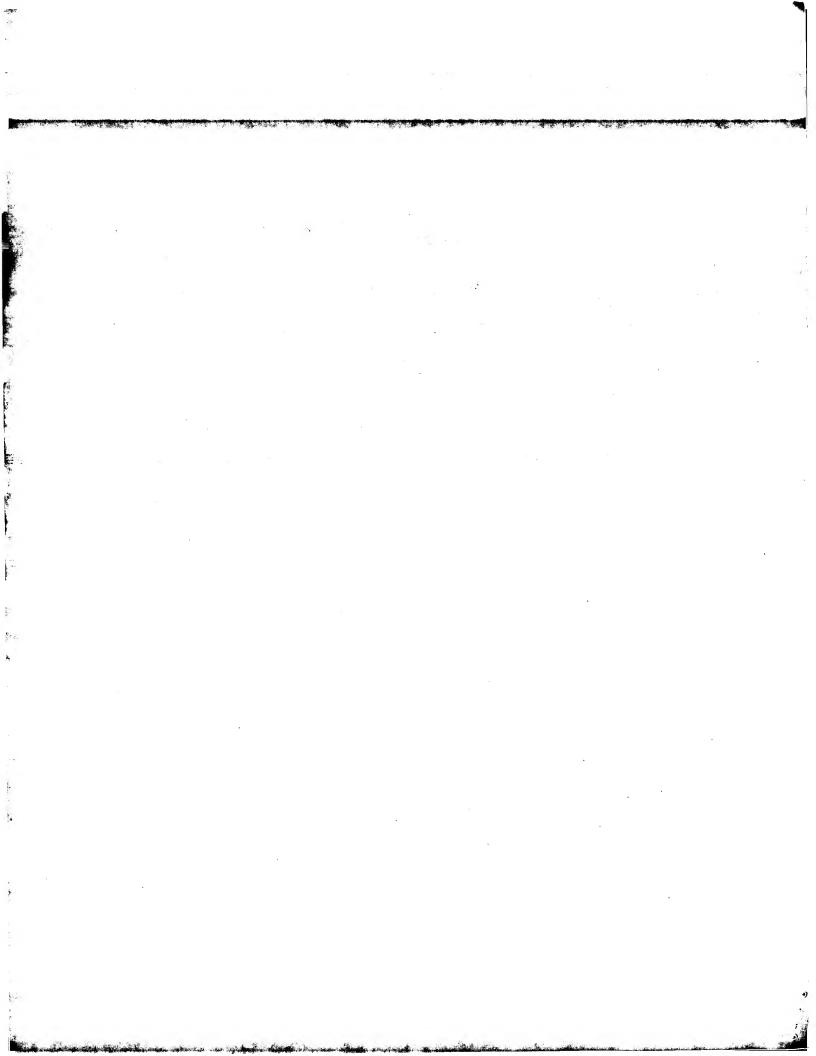

amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                58;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PIR\_68:\* 1: pir1:\* 2: pir2:\* 3: pir3:\* 4: pir4:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
